

SCRIPT EXAMPLES

This example shows the default script in receiving patients

```
StringN #PatientID|$13
Integer #PatientPosition|2
Integer #PatientNumberTest|3
BeginAnalyses
String #AnalysisCode|4
EndAnalyses
Integer #Checksum|3
```

The following are the details of the above Scripts:

Stringn #PatientCode|\$13
Patient Code of variable length terminating with the character <Return> (13 in decimal)

Integer #PatientPosition|\$2
Position of serum cup (string of fixed length equal to 2 characters)

Integer #PatientNumberTest|\$2
Number of tests to be executed (string of fixed length equal to 2 characters)

Set #BeginAnalysesData
Beginning of analysis codes

Stringn #AnalysesCode|\$4
An analysis code of fixed length equal to 4 characters. It must be entered for each type of test as per quantity indicated in the #PatientNumberTest.

Set #EndAnalysesData
End of analysis codes

Integer #Checksum|\$3
Check-Sum (transferred as a string of fixed length equal to 3 characters)
