Version 2.3
Software version 1.4

cobas®

Publication information

Publication version	Software version	Revision date	Change description
1.0	1.3	October 2017	First version ⊡ What is new in software version 1.3 (14)
1.1	1.3	March 2018	Update of HPV-GT and HPV-HR assays • Addition of sample type RCCM • Assays no longer provide an overall result • Update of example result messages ⊡ What is new in publication version 1.1 (14)
1.2	1.3	June 2018	• Support of MTB and MAI assays • Support of RAW SPUTUM and SEDIMENT sample types • Update of HL7 field descriptions to clarify timezone of time stamps • Optional support for QPD-5 and QPD-6 • Update of field description of TCD-2 ⊡ What is new in publication version 1.2 (13)
1.3	1.3	March 2019	• Support of MTB-RIF/INH assay • Correction of errors ⊡ What is new in publication version 1.3 (13)
1.4	1.3	August 2019	• Support of Babesia, BKV, and EBV assays ⊡ What is new in publication version 1.4 (12)
1.5	1.3	September 2019	• Disclaimer added ⊡ What is new in publication version 1.5 (12)
2.0	1.4	November 2019	• Support of additional result scenarios for sending Ct values • Support of automatic result release • Support of regular IVD sample types for the utility channel software. • Removal of previous samples types for the utility channel software ⊡ What is new in publication version 2.0 (12)
2.1	1.4	March 2020	• Support of SARS-CoV-2 assay ⊡ What is new in publication version 2.1 (11)
2.2	1.4	May 2020	• Support of new sample type COBAS PCR MEDIA SWAB for SARS-CoV-2 assay • Support of new sample type URINE for BKV assay ⊡ What is new in publication version 2.2 (11)
2.3	1.4	September 2020	• Support of SCoV2-FluA/B assay • Changes in sample types for utility channel assays ⊡ What is new in publication version 2.3 (10)

⊞ Revision history

Edition notice

This publication is intended for Host Interface programmers and Roche field engineers of the **cobas**® 6800/8800 Systems.

Every effort has been made to ensure that all the information contained in this publication is correct at the time of publishing. However, the manufacturer of this product may need to update the publication information as output of product surveillance activities, leading to a new version of this publication.

Where to find information

The **User Assistance** contains all information about the product, including the following:

- Routine operation
- Maintenance
- Safety
- Troubleshooting information
- Configuration information
- Background information
- Approvals
- Contact addresses

The **Safety Guide** contains important safety information. You must read the Safety Guide before operating the instrument.

The **User Guide** focuses on routine operation and maintenance. The chapters are organized according to the normal operation workflow.

⚠️ **General attention**

To avoid incorrect results, ensure that you are familiar with the instructions and safety information.

- ▶ Pay particular attention to all safety notices.
- ▶ Always follow the instructions in this publication.
- ▶ Do not use the software in a way that is not described in this publication.
- ▶ Store all publications in a safe and easily retrievable place.

Training

Do not carry out operation tasks or maintenance actions unless you have received training from Roche Diagnostics. Leave tasks that are not described in the user documentation to trained Roche Service representatives.

Screenshots

The screenshots in this publication have been added exclusively for illustration purposes. Configurable and variable data, such as tests, results, or path names visible therein must not be used for laboratory purposes.

4

Disclaimer Some assays mentioned in this document may not be approved for distribution in all countries – consult your country regulatory department for more information.

6

Table of contents

Intended use

The **cobas**® 6800/8800 Systems support an automated and integrated workflow to run Polymerase Chain Reaction (PCR) based Nucleic Acid Testing (NAT).

The **cobas**® 6800/8800 Systems combine the functionalities of instrumentation, consumables, reagents, and data management to provide an efficient workflow from sample processing to result interpretation.

Symbols and abbreviations

Product names

Except where the context clearly indicates otherwise, the following product names and abbreviations are used.

Product name	Abbreviation
cobas omni Utility Channel Tool	utility channel software
cobas® 6800/8800 Systems	system

⊞ Product names

Symbols used in the publication

Symbol	Explanation
📞	Contact. Used in the User Assistance. Functionality currently unavailable.
⚙	Code example. Used in code titles and cross-references to codes.
•	List item
💡	Tip. Extra information on correct use or useful hints.
▸	Related topics containing further information
📷	Figure. Used in figure titles and cross-references to figures.
⊞	Table. Used in table titles and cross-references to tables.

⊞ Symbols used in the publication

Abbreviations

The following abbreviations are used.

Abbreviation	Definition
ANSI	American National Standards Institute
ASAP	Assay Specific Analysis Package
ASTM	American Society for Testing and Materials
CSA	Canadian Standards Association
DHCP	Dynamic Host Configuration Protocol

⊞ Abbreviations

Abbreviation	Definition
EC	European Community
EN	European Standard
GUID	Global Unique Identifier
HL7	Health Level 7
IEC	International Electrotechnical Commission
IG Server	Instrument Gateway
IHE	Integrating the Healthcare Enterprise
ISO	International Standards Organization
IVD	In vitro diagnostic
LIS	Laboratory Information System
LOINC	Logical Observation Identifiers Names and Codes
MLLP	Minimal Lower Layer Protocol
n/a	Not applicable
OSI	Open System Interconnection
QC	Quality Control
RMC	Roche Manufactured Control
TCP/IP	Transmission Control Protocol / Internet Protocol
UCAP	Utility Channel Analysis Package
UCUM	Unified Code for Units of Measure
UL	Underwriters Laboratories Inc.
UTC	Coordinated Universal Time

⊞ Abbreviations

What is new in publication version 2.3

Major changes are the following:

New assay The SCoV2-FluA/B assay is now supported.

‣⊟ Supported assays (98)

‣⊟ Sample type, input volume, and pool sizes (99)

‣⊟ Single target identifiers (102)

‣⊟ Result types (104)

‣⊟ Overall result codes (106)

‣⊟ Result interpretation codes (108)

‣⊟ Channel results for assays with 4 channels (112)

‣⊟ Assay-specific result messages (113)

Changes in sample types for utility channel assays

The following sample types for utility channel assays are now supported:

- ▪ VTM (Viral Transport Media)
- ▪ U_simple sample
- ▪ U_sample with swab
- ▪ U_alcohol-based sample

The following samples types for utility channel assays are no longer supported:

- ▪ Cadaveric plasma
- ▪ Cadaveric serum
- ▪ Meatal Swab
- ▪ Raw sputum
- ▪ Sediment
- ▪ SurePath

▸ Sample type, input volume, and pool sizes (99)

What is new in publication version 2.2

New sample type for SARS-CoV-2 assay

The following new sample type for the SARS-CoV-2 assay is now supported:

- ▪ COBAS PCR MEDIA SWAB

▸ Sample type, input volume, and pool sizes (99)

▸ Assay-specific result messages (113)

New sample type for BKV assay

The following new sample type for the BKV assay is now supported:

- ▪ URINE

▸ Sample type, input volume, and pool sizes (99)

▸ Assay-specific result messages (113)

What is new in publication version 2.1

New assay

The SARS-CoV-2 assay is now supported.

▸ Supported assays (98)

▸ Sample type, input volume, and pool sizes (99)

▸ Single target identifiers (102)

▸ Overall result codes (106)

▸ Result interpretation codes (108)

▸ Channel results (109)

▸ Assay-specific result messages (113)

What is new in publication version 2.0

Major changes are the following:

Automatic result release
The system supports the automatic release of results to the LIS.

‣ Automatic result release (79)

Sample types
The utility channel software now supports regular IVD samples.

‣ Sample types (97)

The following samples types are no longer supported:

- U_Simple sample
- U_Sample with swab
- U_Alcohol-based sample).

Results with Ct values
Additional result scenarios are supported for the sending of Ct values.

‣ Sending Ct values (180)

What is new in publication version 1.5

A disclaimer has been added stating that some of the assays mentioned in this document may not be approved for distribution in all countries.

‣ Disclaimer (5)

What is new in publication version 1.4

Major changes are the following:

New assays
The Babesia, BKV, and EBV assays are now supported.

‣ Supported assays (98)

‣ Sample type, input volume, and pool sizes (99)

‣ Single target identifiers (102)

‣ Overall result codes (106)

‣ Result interpretation codes (108)

‣ Channel results (109)

Example result messages	Example result messages are provided for the Babesia, BKV, and EBV assays.

‣ Babesia examples (113)

‣ BKV examples (168)

‣ EBV examples (171)

What is new in publication version 1.3

Major changes are the following:

New assay	The MTB-RIF/INH assay is now supported.

‣ Supported assays (98)

‣ Sample type, input volume, and pool sizes (99)

‣ Single target identifiers (102)

‣ Overall result codes (106)

‣ Result interpretation codes (108)

‣ Channel results (109)

Example result messages	Example result messages are provided for the MTB-RIF/INH assay:

‣ MTB-RIF/INH examples (140)

What is new in publication version 1.2

Major changes are the following:

New sample types	The sample types RAW SPUTUM and SEDIMENT are now supported.

‣ Sample types (97)

New assays	The assays MTB and MAI are now supported.

‣ Supported assays (98)

‣ Sample type, input volume, and pool sizes (99)

‣ Single target identifiers (102)

‣ Overall result codes (106)

‣ Result interpretation codes (108)

‣ Channel results (109)

Example result messages	For the MTB and MAI assays, a number of example result messages are provided.

‣▤ MTB examples (138)

‣▤ MAI examples (142)

Time code clarification	HL7 field descriptions now state whether time stamps within messages indicate local time or UTC (Coordinated Universal Time).

QPD-5 and QPD-6	QPD-5 (rack ID) and QPD-6 (position in rack) are now optionally supported.

‣▤ QPD – query parameter definition segment (50)

‣▤ Sending rack ID and position in rack (50)

TCD-2	The field TCD-2 contains the initial pool size.

‣▤ TCD – test code detail segment (48)

What is new in publication version 1.1

Major changes are the following:

Update of assays	The following changes have been made to the HPV-GT and HPV-HR assay.

- Additional support of RCCM sample type
- The assays no longer provide an overall result (`NA` in OBX-5 of the result interpretation OBX, and in OBX-8 of the overall result OBX)
- Update of example result messages of the 2 assays.

‣▤ Sample types (97)

‣▤ Overall result codes (106)

‣▤ Result interpretation codes (108)

‣▤ HPV-GT examples (144)

‣▤ HPV-HR examples (147)

What is new in software version 1.3

The following new features have been implemented in **cobas**® 6800/8800 Systems software version 1.3.

Non-Roche external controls	The use of non-Roche external controls requires no changes in the host interface configuration. The LIS handles non-Roche external controls like normal samples. Non-Roche external controls are identified by a prefix in the barcode.

Inventory information   Lot numbers and expiry dates of reagents and consumables used to generate the results are sent together with the test results in an INV segment.

‣⊞ INV in OUL^R22 message (69)

‣⊞ OUL^R22 (observation result) (79)

‣⊞ Results with reagent and consumables (192)

Ct values   The system can send Ct values together with the test results in a supplementary OBX segment.

‣⊞ OBX for sending Ct values (62)

‣⊞ OUL^R22 (observation result) (79)

‣⊞ About Ct values (180)

Assays with no overall result   For assays not supporting overall results, the system sends NA in OBX-5 of the result interpretation OBX, and also in OBX-8 of the overall result OBX.

‣⊞ OBX in result message (54)

‣⊞ Overall result codes (106)

‣⊞ Result interpretation codes (108)

New assays   The following assays have been added.

- HIV-PSC
- TV
- MG
- TV/MG

‣⊞ Assay-specific parameters (98)

‣⊞ Result codes for OBX segment (104)

‣⊞ Assay-specific result messages (113)

Workflow

Workflows

This chapter describes the workflow of communication between the **cobas**® 6800/8800 Systems and the LIS.

In this chapter   **1**

1 Workflows

1 Workflows

Prerequisites

The connection between the system and the LIS is only established by the system. The LIS acts as the server.

Communication protocol

The system uses the HL7 protocol version 2.5 to communicate with the LIS. The ASTM protocol is not supported.

-ᄋ̣- All HL7 communication between the system and the LIS must be ASCII code plain text.

Connection set-up

The system connects to the LIS through a FortiGate-40C firewall. A Roche Service representative configures the firewall according to local customer network constraints.

The system is by default configured to connect to a LIS server on Port 3120. The system does not accept any incoming connections.

-ᄋ̣- Firewall security policy authorizes communication only via pre-established IP addresses.

For more information about firewall configuration, refer to the *Software Installation Manual*.

1 Workflows

Supported workflows

The system supports 4 basic workflows to communicate with the LIS.

Unsolicited test order submission

The LIS sends an unsolicited test order to the system.

Direction	HL7 message	LAB workflow	Reference
System←LIS	OML^O33	LAB-21 Test order	🔹 OML^O33 (75)
System→LIS	ORL^O34		🔹 ORL^O34 (76)

⊞ Test order download

Solicited test order submission

The system requests a test order from the LIS for each sample after sample recognition. The LIS sends the requested test order.

Direction	HL7 message	LAB workflow	Reference
System→LIS	QBP^Q11	LAB-22 Test order query	🔹 QBP^Q11 (77)
System←LIS	RSP^K11		🔹 RSP^K11 (78)
System←LIS	OML^O33	LAB-21 Test order	🔹 OML^O33 (75)
System→LIS	ORL^O34		🔹 ORL^O34 (76)

⊞ Test order query

Result upload

The system sends test results to the LIS.

Direction	HL7 message	LAB workflow	Reference
System→LIS	OUL^R22	LAB-23 Result	🔹 OUL^R22 (observation result) (79)
System←LIS	ACK^R22		🔹 ACK^R22/U03/U05/U14 (84)

⊞ Result upload

Test order delete notification

The system notifies the LIS when a test order is deleted.

Direction	HL7 message	LAB workflow	Reference
System→LIS	OUL^R22	LAB-23 Test order deletion	🔹 OUL^R22 (observation result) (79)
System←LIS	ACK^R22		🔹 ACK^R22/U03/U05/U14 (84)

⊞ Test order delete notification

Instrument status and capacity update

The system notifies the LIS about a status change of an instrument.

Direction	HL7 message	Workflow	Reference
System→LIS	INU^U05	System sends instrument name, state, and capacity	🔹 INU^U05 (86)
System←LIS	ACK^U05		🔹 ACK^R22/U03/U05/U14 (84)

⊞ Instrument status update

Instrument inventory request

The LIS requests a status update from all instruments connected to the system. For each instrument, the system returns a separate INR^U05 message containing instrument status and inventory.

Direction	HL7 message	Workflow	Reference
System←LIS	INR^U14	LIS requests state update from all instruments	▸🗎 INR^U14 (85)
System→LIS	ACK^U14		▸🗎 ACK^R22/U03/U05/U14 (84)
System→LIS	INU^U05	System returns instrument name, state, and inventory (1 INU^U05 message per instrument)	▸🗎 INU^U05 (86)
System←LIS	ACK^U05		▸🗎 ACK^R22/U03/U05/U14 (84)

⊞ Instrument inventory request

Sample tube location notification

The system notifies the LIS when a *sample tube* is loaded on, or unloaded from an analytic instrument or a pooling instrument.

Note: The system does not notify the LIS about the loading/unloading of a *pool tube*.

Direction	HL7 message	Workflow	Reference
System→LIS	SSU^U03	System sends instrument name, sample ID, and loaded/unloaded flag	▸🗎 SSU^U03 (87)
System←LIS	ACK^U03		▸🗎 ACK^R22/U03/U05/U14 (84)

⊞ Sample tube location notification

Test order process notification (no pooling)

The system notifies the LIS when the processing of an order has started, and when the processing has ended.

Direction	HL7 message	Workflow	Reference
System→LIS	OUL^R22	System sends instrument name, sample information, and process-start flag	▸🗎 OUL^R22 (order tracking) (82)
System←LIS	ACK^R22		▸🗎 ACK^R22/U03/U05/U14 (84)
System→LIS	OUL^R22	System sends instrument name, sample information, and process-end flag	▸🗎 OUL^R22 (order tracking) (82)
System←LIS	ACK^R22		▸🗎 ACK^R22/U03/U05/U14 (84)

⊞ Test order process notification (no pooling)

Test order process notification (with pooling)

The system notifies the LIS about the following 2 events:

- The primary sample is pooled for the first time (primary pool).
- The final result is assigned to the primary sample inside the pool.

Note: The system does not send a message for the creation of secondary or resolution pools, or when the pool tube is processed on the instrument.

Direction	HL7 message	Workflow	Reference
System→LIS	OUL^R22	System sends instrument name, sample information, and pooling-start flag	⊞ OUL^R22 (order tracking) (82)
System←LIS	ACK^R22		⊞ ACK^R22/U03/U05/U14 (84)
System→LIS	OUL^R22	System sends instrument name, sample information, and pooling-end flag	⊞ OUL^R22 (order tracking) (82)
System←LIS	ACK^R22		⊞ ACK^R22/U03/U05/U14 (84)

⊞ Test order process notification (with pooling)

HL7 reference

HL7 transport protocol

This chapter provides a brief overview on HL7 and describes the HL7 Minimal Lower Layer Protocol.

In this chapter 2

2 HL7 transport protocol

2 HL7 transport protocol

About HL7

HL7 is an ANSI accredited organization dedicated to developing standards for the exchange of electronic health information. The organization's goal is to improve the interoperability of software applications used by the health care industry.

HL7 standards

In regular meetings called HL7 Work Group, HL7 members discuss and document how healthcare-related information should be exchanged between disparate healthcare applications.

HL7 is the most acknowledged standard in the healthcare industry for exchanging health information among disparate healthcare systems. HL7 currently considers the following as its primary standards based on their widespread use.

- **Version 2.x and Version 3 Messaging Standard** – interoperability specifications for health and medical transactions.
- **Clinical Document Architecture (CDA)** – an exchange model for clinical documents, based on HL7 Version 3.
- **Continuity of Care Document (CCD)** - a US specification for the exchange of medical summaries, based on CDA.
- **Structured Product Labeling (SPL)** – specifications for the published information that accompanies a medicine, based on HL7 Version 3.
- **Clinical Context Object Workgroup (CCOW)** – an interoperability specification for the visual integration of user applications.

For more detailed information about HL7 standards, refer to `www.hl7.org`.

OSI model

In the OSI model of the ISO, the functions of both communication software and hardware are separated into 7 layers, or levels.

2 HL7 transport protocol

The "7" in HL7 refers to the seventh, or application, layer of the OSI model. The application layer serves as the work area for users to access network services. It includes commonly needed functions including:

- Remote file access
- Supply sharing
- Network management
- Directory services
- Remote printer access
- Electronic messaging (e.g. email)
- Network virtual terminals

The HL7 standards provide definitions for the data to be exchanged, the timing of the data exchanges, and the communication of application-specific errors between the applications.

Limitations HL7 does not provide or support the following functionality.

- *Security* – HL7 does not provide for the enforcement of the user's security policies. In addition, HL7 does not specify a specific encryption method.
- *Confidentiality* – HL7 does not address this issue and makes no assumption about the use of the data at the source or destination of a message.
- *Accountability* – HL7 does not define transaction processing features needed in the user's environment.

⚠ **WARNING**

Unauthorized access to confidential data

The HL7 version supported by the system does not provide any integrity protection and encryption beyond TCP-mediated control of data flow. The connection is therefore vulnerable to unauthorized access.

▶ Ensure that the connection is secured and protected against unauthorized access (physical access protection, network security).

▶ Restrict physical access to the system.

▶ Read the respective safety information on data security provided along with this product.

2 HL7 transport protocol

⚠ WARNING

Disclosure of confidential data

Unauthorized users can view confidential data in an HL7 message when entered as unencrypted (plain) text.

▶ Do not enter any confidential data as plain text.

▶ Restrict physical access to the system.

▶ Read the respective safety information on data security provided along with this product.

2 HL7 transport protocol

Minimal Lower Level Protocol

The Minimal Lower Layer Protocol (MLLP) is the most common standard for transmitting HL7 messages via TCP/IP over a local network.

A wrapping protocol is required to identify the start and the end of an HL7 message because TCP/IP is a continuous stream of bytes.

When using MLLP, an HL7 message is sent in one block. A header and a trailer wrap the message block to mark its beginning and end. Headers and trailers are not part of the message's content.

```
<Start block>Data<End block><CR>
```

<Start block>   Start block character (1 byte)
ASCII `<VT>`, i.e. `<0x0B>`. Do not confuse with the ASCII characters `SOH` or `STX`.

Data   Data (variable number of bytes) can contain any displayable ASCII characters and the carriage return character `<CR>`.

<End block>   End block character (1 byte)
ASCII `<FS>`, i.e. `<0x1C>`. Do not confuse with the ASCII characters `ETX` or `EOT`.

<CR>   Carriage Return (1 byte)
The ASCII carriage return character, i.e. `<0x0D>`.

Sending mode   The system sends one message at a time via a single connection.

- *Sequential sending:* After sending a message, the system waits for the ACK from the host. If the host does not reply within 30 sec, the system marks the message as "*transmission failed*" and sends the next message.
- *Parallel sending:* By default, the system sends messages one after the other without waiting for the individual ACKs as long as 5 or less ACKs are pending. If 5 ACKs are pending, the system must wait for an ACK before sending the next message.

  If you wish to change the default sending mode, talk to your Roche Service representative.

HL7 elements

This chapter describes the HL7 elements that define a message.

In this chapter **3**

3 HL7 elements

3 HL7 elements

About HL7 elements

Data in an HL7 message is organized hierarchically.

Message				
	Segment			
		Field		
			Component	
				Subcomponent

⊞ HL7 hierarchy

Message

HL7 defines different types of messages for specific purposes. A message is defined as an entire unit of data transmitted between sender and receiver. HL7 messages are written by a non-XML based language. A message is trigger by a real event which generates a workflow (e.g. availability of a test result to be sent to the LIS).

Segment

Each line of an HL7 message is a segment. Segments can be required or optional, and occur only once or repeatedly in a message. Each segment starts with a 3-character string (ID) that defines the segment type. The ID contains only printable characters (ASCII 32–126).

Field

Each segment consists of fields. A field contains information about the purpose of the segment. Fields may be required, optional, or conditional, and may occur only once or repeatedly.

Component and subcomponent

Fields are subdivided into components that refer to a logical set of characters within a field. Components can be further divided into subcomponents.

Delimiters

Encoding characters, or delimiters, define how data is separated in an HL7 message. The following delimiters are supported as specified in the MSH segment.

Delimiter	Function
|	Separates fields
^	Separates components
&	Separates subcomponents
~	Separates repetitions
\	Indicates the escape character

⊞ HL7 delimiters

Data type

HL7 data types define the type of data that can be included in a field. A data type may contain additional data types that are referenced as components or subcomponents. 2–3 letter codes are used to specify the data type. Supported data types by the system are listed below.

3 HL7 elements

Data type	Description
CE	Coded Element
EI	Entity Identifier
EIP	Entity Identifier Pair
ID	Coded Values for HL7 tables
NA	Numeric Array
NM	A numeric value. Positive (+) or negative (-) is indicated before the numeric value. If it is not indicated, it is treated as positive (+). If a decimal point is not included, the numeric value is treated as an integer. There are no restrictions for placing '0' in the front or for multiple '0' placed at the end of numbers with decimal points.
ST	An alphanumeric string with a maximum length of 199 if not otherwise stated.
TS	Time Stamp. The default format is YYYYMMDDHHMMSS • YYYY is the four-digit Gregorian year • MM is the month • DD is the day. • HH is the hour, as 24-hour military time. • MM is the minute. • SS is the second. For example, 11:53 a.m. and 3 seconds, on September 5, 2015 is indicated 20150905115303.
TX	Text Data
XCN	Extended Composite ID Number and name for persons

▦ HL7 data types

Transmitting the null value

The "null" value is transmitted as 2 double quote marks (`""`), which is relevant when a message is sent to update a record. If no value is sent (i.e. omission of an optional field), the old value remains unchanged. If the null value is sent, the old value is changed to null (zero).

Color-coding

This publication visualizes the directionality of HL7 messages or message elements by different colors as illustrated below:

```
Incoming message (system<-LIS)
```

```
Outgoing message (system->LIS)
```

```
Message with unspecified directionality
```

HL7 cardinality and usage

Both cardinality and usage determine the appearance of HL7 elements (segment, field, component) in a message.

Cardinality

Cardinality identifies the minimum and maximum number of repetitions for a particular HL7 element (segment group, segment, or field). Cardinalities are expressed as a minimum-maximum pair of non-negative integers.

Value	Description
[0..0]	Element is never present.
[0..1]	Element may be omitted and can have at most 1 occurrence.
[1..1]	Element must have exactly 1 occurrence .
[0..n]	Element may be omitted or may repeat up to n times.
[1..n]	Element must appear at least once and may repeat up to n times.
[0..*]	Element may be omitted or repeat for a non-specified number of times ,
[1..*]	Element must appear at least once, and may repeat for a non-specified number of times.

▦ HL7 cardinality

Usage

Usage further defines the circumstances under which an element appears in a message. Some elements must always be present, others may never be present, and others may only be present under certain circumstances. The following codes are used to define the usage of an element.

Value	Description
R	Required
RE	Required but may be empty
O	Optional
C	Conditional
CE	Conditional but may be empty
-	Not supported

▦ HL7 usage

In addition, square and curly brackets are used to indicate appearance and repetition of segments and segment blocks in the HL7 message structure trees.

Value	Description
[..]	0 or 1 occurrence
{..}	1 or multiple occurrences
[{..}]	0 or multiple occurrences

3 HL7 elements

💡 fields that are not supported by the system, are omitted in the following segment tables.

MSH – message header segment

The MSH segment defines intent, source, destination, and some syntax specifications of a message.

MSH in incoming messages (LIS→system)

Field	Component	Element Name	Data Type	Usage	Maximum Length	Description
MSH-1		Field Separator	ST	R	1	The character specified in MSH-1 defines the field separator to be used for the rest of the message. The value is: `|` (ASCII 124).
MSH-2		Encoding Characters	ST	R	4	The field contains the 4 delimiters in the following order: component separator, repetition separator, escape character, and subcomponent separator. The required values are: `^~\&` (i.e. ASCII 94, 126, 92, and 38).
MSH-3		Sending Application	ST	O	227	The field uniquely identifies the sending application. The LIS server defines its content.
MSH-4		Sending Facility	ST	O	227	HL7 does not specify any values for MSH-4. The system does not process the content of this field.
MSH-5		Receiving Application	ST	O	227	The field uniquely identifies the receiving application. The LIS server defines its content.
MSH-6		Receiving Facility	ST	O	227	HL7 does not specify any values for MSH-6. The system does not process the content of this field.
MSH-7		Date/Time of Message	TS	O	24	Date/time when the sending system created the message. Supported format: `YYYYMMDDHHMMSS`. No time zone is specified.
MSH-9		Message Type	ST	O	15	Defines the type of message and trigger event (e.g. ORL^O34)
		Message Type^Event Type^Message Structure				
	MSH-9.1	Message Type	ST	O		The field defines the message type (see HL7 table 0076). The system supports the following values: • `ACK` = General acknowledgment message • `OML` = Laboratory order message • `RSP` = Segment pattern response • `INR` = Automated equipment inventory request message
	MSH-9.2	Event Type	ST	O		The event type defines the code for the trigger event (HL7 table 0003). The system supports the following values: • `K11` = RSP - Segment pattern response in response to QBP^Q11 • `Q11` = QBP - Query by parameter requesting an RSP segment pattern response • `R22` = OUL - Unsolicited sample Oriented Observation Message • `O33` = OML - Laboratory order for multiple orders related to a single sample • `O34` = ORL - Laboratory order response message to a multiple order related to single sample OML • `U03` = SSU/ACK - sample status update • `U05` = INU/ACK - Automated equipment inventory update • `U14` = Automated equipment inventory request
	MSH-9.3	Message Structure	ID	O		This field is ignored.

⚙ SPM segment

SAC - sample and container detail segment

The SAC segment contains the data necessary to maintain the containers that are being used throughout the Laboratory Automation System.

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
SAC-2		Secondary Sample ID	ST	O	O	427	💡 Usage of this field is not according to HL7 standards. SAC-2 is a free-text field for the customer. The system returns the value as received from the sending application.
SAC-3		Accession Identifier	ST	-	C	80	Sample ID/tube barcode This field is only used in the SSU^U03 message.
SAC-8		Container Status	CE	-	O	250	This field identifies the status of the container containing the sample at the time that the transaction was initiated. This field is only used in the SSU^U03 message
		Identifier^^Name of Coding System					
	SAC-8.1	Identifier	ST				Container status code Supported values: • `I` = Identified (sample loaded on instrument) • `L` = Left Equipment (sample unloaded from instrument)
	SAC-8.2	Not supported					Not supported
	SAC-8.3	Name of Coding System	ID				Fixed value = `HL70370`
SAC-21		Process Input Volume	NM	R	R	20	💡 Usage of this field is not according to HL7 standards. The system uses SAC-21 to specify the value of the process input volume. The unit of the volume is specified in SAC-24. The volume depends on assay and sample type. ▸ Assay-specific parameters (98) This field is empty in the SS^U03 message.

⊞ SAC - sample segment

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
SAC-24		Volume Units	CE	R	R	8	The field specifies the unit for the process input volume. • The volume unit must be set to microliter in UCUM standard. • The default unit according to HL7 standards is milliliters, which should be assumed if no units are reported. This field is empty in the SS^U03 message.
	Identifier^^Name of Coding System						
SAC-24.1		Identifier	ST	R	R		UCUM coded unit of measure. The value is `uL`.
SAC-24.1		Not used					
SAC-24.3		Name of Coding System	ST	R	R		The value is `UCUM`.

⚙ SAC segment in OUL^R22 (result) message

OBR – observation order segment

The OBR segment identifies the type of tests to be performed on the sample and ties that information to the test order.

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
OBR-1		Set ID - OBR	ST	R	R	1	Sequence number that identifies the numbers of OBR segments (1 for the first OBR, 2 for the second, and so on). The value is always 1 because the system supports only 1 OBR segment.
OBR-2		Place Order ID	ST	R	R	50	The field is empty or contains the placer order number if sent by the LIS in the unsolicited test order (OML^O33). For all follow-up messages to the test order, the system returns the initial value received from the LIS.
OBR-4		Universal Service Identifier	ST	R	R	705	The field contains the observation order ID identifying the test order type. The system treats OBR-4 as a single ID and does not validate the 3 components individually. ▸📖 For supported codes, see Assay-specific parameters (98)
		Identifier^Test^Name of Coding System					
	OBR-4.1	Identifier	ST	R	R		OBR-4.1 is the LOINC code. ▸📖 For supported codes, see Assay-specific parameters (98)
	OBR-4.2	Test	ST	R	R		▸📖 For supported codes, see Assay-specific parameters (98)
	OBR-4.3	Name of coding system	ID	R	R		▸📖 For supported codes, see Assay-specific parameters (98)
OBR-11		Sample Action Code	ST	-	R	1	The field specifies the action to be taken concerning the samples that accompany or precede an order. It further qualifies the general action indicated by the order control code contained in the accompanying ORC segment. When the system sends an ORL-O34 message to accept a test order, or an OUL-R22 message to send a test order status update, OBR-11 contains the following code: • `A` = Assign ordered tests to the existing sample If the system sends a test result or a delete order with an OUL^R22 message, OBR-11 is empty.

3 HL7 elements

TCD - test code detail segment

The TCD segment contains the data necessary to perform operations or calculations, or execute decisions by the laboratory automation system.

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
TCD-1		Universal Service Identifier	ST	R	R	705	The field identifies the test code that information is being transmitted about. The system treats TCD-1 as a single ID and does not validate the 3 components individually. ⧉ For supported values, see Assay-specific parameters (98)
	Identifier^Test^Name of Coding System						
TCD-1.1		Identifier	ST	R	R		TCD-1.1 is the LOINC code. ⧉ For supported codes, see Assay-specific parameters (98)
TCD-1.2		Test	ST	R	R		⧉ For supported codes, see Assay-specific parameters (98)
TCD-1.3		Name of coding system	ID	R	R		⧉ For supported codes, see Assay-specific parameters (98)
TCD-2		Pool Size	ST	R	R	8	💡 Usage of this field is not according to HL7 standards. The system uses TCD-2 instead to define the initial pool size. The instrument can combine (pool) multiple samples and then perform a common test on this mixture (pool). TCD-2 indicates the maximal size of the pool in which the sample was participating.
	^1^:^Pool Size						
TCD-2.1		Not used					
TCD-2.2		Num1	NM	R			Fixed value = `1`
TCD-2.3		Separator	ST	R			Fixed value = `:`
TCD-2.4		Num2	NM	R			• Pool size = `0`: pooling not possible. The sample is directly loaded on the analytic instrument. • Pool size = `1`: sample can be aliquoted on the pooling instrument or directly loaded on the analytic instrument. • Pool size > `1`: defines the pool size. Only sample type `plasma` can be pooled. ⧉ For supported pool sizes, see Assay-specific parameters (98)

```

⚙ TCD segment

ORC – common order segment

The ORC segment is used to transmit fields that are common to all orders.

The ORC segment is required in incoming test orders (OML^O33), and in the outgoing response for an released test order (ORL^O34).

Field	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
ORC-1	Order Control	ST	R	–	2	The field defines the function of the order segment. In incoming test orders, the supported value is: • `NW` = New Order
ORC-5	Order Status	ST	–	R	2	The field specifies the status of an order. It reports the status of an order either upon request (solicited), or when the status changes (unsolicited). It does not initiate action. The order status is assumed to reflect the status as it is known to the sending application at the time the message is sent. In outgoing test orders, the supported value is: • `IP` = In Process
ORC-9	Date/Time of Transaction	TS	–	R	24	The field contains the date and time (local time) of the event that initiated the current transaction as reflected in ORC-1. The field is not equivalent to MSH-7, which reflects the date/time of the physical message. Supported format: `YYYYMMDDHHMMSS`

⊞ ORC – common order segment

3 HL7 elements

QPD - query parameter definition segment

The QPD segment contains the name of the query.

QPD is required in outgoing QBP^Q11 messages sent to the LIS. Although required by HL7, the system ignores the content of QPD in incoming RSP^K11 messages sent by the LIS.

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
QPD-1		Query Message Name	ST	R	250	The field contains the name of the query. The content must be `WPS^Work·Order·Step^IHE_LABTF` to indicate the use of the IHE Laboratory Technical Framework profile.
		Identifier^Text^Name of Coding System				
QPD-1.1		Identifier	ST	R		Fixed value = `WOS`
QPD-1.2		Text	ST	R		Fixed value = `Work·Order·Step`
QPD-1.3		Name of Coding System	ID	R		Fixed value = `IHE_LABTF`
QPD-2		Query Tag	ST	O	32	The system populates QPD-2 with a query tag (random ID) when requiring an order from the LIS. The LIS reflects this tag in an RSP^K11 message but the system ignores its content.
QPD-3		Sample Identification	EIP	R	100	QPD-3 is used for sample identification and is matched against SPM-2 (Sample ID).
QPD-5		Rack ID	ST	O	128	QPD-5 is used to identify the RD5/MPA rack ID. 💡 This field is a Roche-specific field.
QPD-6		Position in the Rack	NM	O	1	QPD-6 identifies the position of the sample in the rack. Possible values: 1, 2, 3, 4, or 5. 💡 This field is a Roche-specific field.

⊞ QPD - query definition segment

Sending rack ID and position in rack

By default, the option to send rack ID and the position of the sample within the rack to the host/LIS is disabled. To enable this option, contact your Roche Service representative or the supervisor.

When the option is enabled, the system sends the rack ID and the position of the sample tube within the rack to the host/LIS together with the sample identification, as shown in the second example below.

`QPD|WOS^Work Order Step^IHE_LABTF||$00KHPPK2|||`

⚙ QPD segment in QBP^Q11 message with option to send rack ID (including sample position on rack) disabled.

```
QPD|WOS^Work Order Step^IHE_LABTF||$00KHPPK2||1548
|1
```

QPD segment in QBP^Q11 message with option to send rack ID (including sample position on rack) enabled.

3 HL7 elements

MSA – message acknowledgement segment

The MSA segment contains information sent while acknowledging another message.
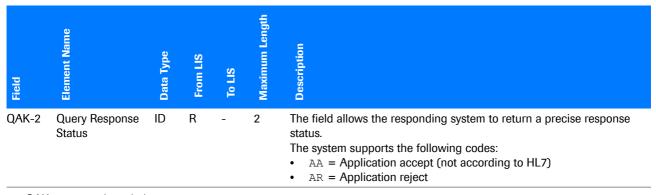

Field	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
MSA-1	Acknowledgement Code	ST	R	R	2	The field contains an acknowledgment code. Refer to HL7 table 0008. The system supports the following codes: • `AA` = Application Accept • `AR` = Application Reject
MSA-2	Message Control ID	ST	R	R	199	The field contains the message control ID sent by the sending system (i.e. the control ID of field MSH-10 of the original message). It allows the sending system to associate this response with the message for which it is intended.

⊞ MSA – message acknowledgement segment

```
MSA|AA|ee354736-52c3-4174-9145-35993a1716fa
```

⚙ MSA segment

QAK - query acknowledgement segment

The QAK segment contains information sent with responses to a query.

Field	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
QAK-2	Query Response Status	ID	R	-	2	The field allows the responding system to return a precise response status. The system supports the following codes: • `AA` = Application accept (not according to HL7) • `AR` = Application reject

⊞ QAK - query acknowledgement segment

```
QAK||AA
```

⚙ QAK segment

OBX – observation result segment

The OBX segment is used to transmit a single observation or observation fragment related to a single test (OBR) or sample (SPM). It is the smallest indivisible unit of a report.

In this section

OBX in result message (54)

OBX in delete test order message (58)

OBX in test order process notification (60)

OBX for sending Ct values (62)

OBX in result message

The observation result segment (OBX) segment is used to transmit a single observation or observation fragment related to a single test (OBR) or sample (SPM). It is the smallest indivisible unit of a report.

When the system sends a result in a OUL^R22 message, each OBX segment contains the following structure.

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
OBX-1		Set ID – OBX	SI	R	4	The field contains the sequence number of the OBX element in the message. • Values range from 1 to 9999
OBX-2		Value Type	ID	R	2	The field contains the format of the observation value in OBX-5. Supported values: • `NM` = Numeric (OBX-5 contains a numeric result) • `ST` = String (OBX-5 contains a non-numeric result) • Empty if result is invalid
OBX-3		Observation Identifier	CE	R	705	The system treats OBX-3 as a single ID and does not validate the 3 components individually. • For an overall result or result interpretation, this field contains the Universal Service Identifier. • For a channel result, this field contains the single channel identifier. ▸ Values are assay-specific, see Result codes for OBX segment (104)
		Identifier^Test^Name of Coding System				
OBX-3.1	Identifier		ST	R		
OBX-3.2	Test		ST	R		
OBX-3.2	Name of coding system		ID	R		

⊞ OBX – observation result segment

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
OBX-4		Observation Sub-ID	ST	C	20	The field is used to distinguish between multiple OBX segments with the same observation ID organized under one OBR. It is applicable to overall results and result interpretations. Supported values are: • `1/1` = overall result • `1/2` = result interpretation • Empty = channel result
OBX-5		Observation Value	ST/NM	R	24	Supported data types: • `ST` for qualitative assay • `NM` for quantitative assay Supported values for overall results: • `ValueNotSet` • Empty if result is invalid Supported values for result interpretations: • `Invalid` • `Valid` • `Positive` • `Negative` • `Reactive` • `Non-Reactive` • `Target Not Detected` • `Titer` • `> Titer max` • `< Titer min` • `UC_Positive` • `UC_Negative` • `NA` (not applicable, sent for assays that do not generate an overall result) Supported values for channel results: • `ValueNotSet` • For numeric results, the value contains the 3 significant digits of the value represented with precision of 3. • Empty if result is invalid ⊙ For assay-specific codes, see Result codes for OBX segment (104)
OBX-6		Units	CE	R	705	The field defines the exponent to the base 10 that is multiplied by the significant digits of the observation result according to the formula: $[\text{OBX-5}] * 10^{[\text{OBX-6}]}$. The exponent is reported together with the unit. The ASAP allows the following 2 strings: • `10*exponent.[iU]/mL^^UCUM` • `10*exponent.{Copies}/mL^^UCUM` • Empty for qualitative assays
		Identifier^^Name of Coding System				
	OBX-6.1	Identifier	ST	R		The ASAP supports the following 2 values: • `10*exponent.[iU]/mL` • `10*exponent.{Copies}/mL` `Exponent` is replaced with a number equal to the scientific notation of numbers.
	OBX-6.2	Not used				
	OBX-6.3	Name of Coding System	ID	R		Defines the unit. Fixed value = `UCUM`

▦ OBX – observation result segment

3 HL7 elements

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
OBX-8		Interpretation Code	ST	R	5	The field is used in combination with OBX-11 to notify the status of the results. One or more codes or errors flags can be used (e.g. `SysError~UserError`). Supported values are dynamic and depend on the implemented ASAP. ▸📖 For current values, see Result codes for OBX segment (104) ▸📖 For supported error flags for invalid results, see Error flags (196)
OBX-11		Observation Result Status	ST	R	1	The field is used in combination with OBX-8 to notify the status of the results. The system supports the following values: • `F` = Final and valid result • `X` = No results can be obtained for this observation For result interpretations and overall results, "F" is sent if one of the following 2 conditions is true: 1. Result state is "Valid" 2. Result state is "NotDefined", and no final flag is assigned to the result. If neither condition is true, "X" is sent.
OBX-16		Responsible Observer	XCN	R	36	The field identifies the individual directly responsible for the observation. In automatically released results, the system sends the Instrument Gateway ID rather than the user.
OBX-18		Equipment Instance Identifier	EI	R	256	The field identifies the Equipment Instance (e.g., Analyzer, Analyzer module, group of Analyzers, etc.) responsible for the production of the observation. This field is repeated 3 times, showing a hierarchical representation of the equipment. The tilde (~) is the HL7 repetition delimiter.
	*C6800/8800^Roche^^~SerialID^Roche^^~ClusterID^Instrument-ID^^*

OBX in delete test order message

In a delete test order message, the OBX segment contains the following structure.

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
OBX-1		Set ID - OBX	SI	R	4	The field contains the sequence number of the OBX element in the message. • Values range from 1 to 9999 • For a single channel result, the value is always 1
OBX-3		Observation Identifier	CE	R	705	The system treats OBX-3 as a single ID and does not validate the 3 components individually. • For an overall result or result interpretation, this field contains the Universal Service Identifier. • For a channel result, this field contains the single channel identifier. ⊡ Values are assay-specific, see Result codes for OBX segment (104)
		Identifier^Test^Name of Coding System				
	OBX-3.1	Identifier	ST	R		
	OBX-3.2	Test	ST	R		
	OBX-3.3	Name of coding system	ID	R		
OBX-8		User Canceled Flag	ST	R	5	Fixed value = `U04` ⊡ See also Error flags (196)
OBX-11		Observation Result Status	ST	R	1	The field is used in combination with field OBX-8 to notify the status of the results. The system supports the following value: • `X` = No results can be obtained for this observation ⊡ See also OUL^R22 (test order deletion) (81)
OBX-16		Responsible Observer	XCN	R	36	The field contains the name of the user who deleted the test order.

⊞ OBX – observation result segment

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
OBX-18		Equipment Instance Identifier	EI	R	256	The field identifies the Equipment Instance (e.g., Analyzer, Analyzer module, group of Analyzers, etc.) responsible for the production of the observation. This field is repeated 3 times, showing a hierarchical representation of the equipment. The tilde (~) is the HL7 repetition delimiter.

▪ OUL^R22 (test order deletion) (81)

OBX in test order process notification

When the system sends an OUL^R22 message to update the LIS about the test order process, the OBX segment contains the following structure.

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
OBX-1		Set ID – OBX	SI	R	4	The field contains the sequence number of the OBX element in the message. Fixed value = `1`
OBX-2		Value Type	ID	R	2	The field contains the format of the observation value in OBX-5. Supported value: • `CE` = Code Entry
OBX-3		Observation Identifier	CE	R	705	The system treats OBX-3 as a single ID and does not validate the 3 components individually. • For an overall result or result interpretation, this field contains the Universal Service Identifier. • For a channel result, this field contains the single channel identifier. Values are assay-specific, see Result codes for OBX segment (104)
		`PROCESS_STEP^^99ROC`				
OBX-3.1		Identifier	ST	R		Fixed value = `PROCESS_STEP`
OBX-3.2		Test	ST	R		This component is empty.
OBX-3.2		Name of coding system	ID	R		Fixed value = `99ROC`
OBX-5		Observation Value	Varies	R	99999	in test order process notification message, this field describes the status of the order process.
OBX-5.1				R		Supported values: • `SAMP_TRANS_STARTED` = Sample transfer started • `CALC_FINISHED` = Calculation finished • `POOLINGWORKFLOW_STARTED` = Pooling workflow started • `POOLINGWORKFLOW_FINISHED` = Pooling workflow finished
OBX-5.2		Not supported				
OBX-5.3				R		Fixed value = `99ROC`
OBX-8		Interpretation Code		-		This field is empty.
OBX-11		Observation Result Status	ST	R	1	Supported values: • `I` = Incomplete (processing started, pooling workflow started • `R` = Result stored (processing finished, pooling workflow finished) Used codes are not according to HL7 standards.

⊞ OBX – observation result segment

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description

⚙ NTE segment

EQU - equipment detail segment

The EQU segment contains the data necessary to identify and maintain the equipment.

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
EQU-1		Equipment Instance Identifier	EI	R	R	22	This field identifies the equipment
	EQU-1.1	Entity Identifier	ST				Instrument ID
	EQU-1.2	Namespace ID	IS				Identifies the institution. Fixed value: `Roche`
EQU-2		Event Date/Time	TS	R	R	26	Time stamp (local time) of latest status change in the format `YYYYMMDDHHMMSS`
EQU-3		Equipment State	CE	R	R	250	This field identifies the status of the equipment at the time that the transaction was initiated. The system supports the following HL7 codes: • `RS` = Ready to start • `MA` = Maintenance • `OP` = Normal operation • `ES` = E-Stopped • `FL` = Failure • `UN` = Unknown ⧉ To map the HL7 codes to the instrument state, see table below.

▦ EQU - equipment detail segment

Analytic Instrument state	HL7 code
StandBy	RS
Maintenance/Service	MA
Ready/Running	OP
Paused	ES
State Error	FL
Offline	UN

```

⚙ EQU segment (time stamp in EQU-2 shows local time)

INV – inventory detail segment

The INV segment is used to send inventory information in the following message types:

- In INU^U05 message: the system sends status/inventory from all instruments to the host.
- In OUL^R22 result message: The system sends lot numbers and expiry dates of controls, reagents, and consumables that were used to generate the results.

In this section

INV in INU^U05 message

The INV segment contains information necessary to track the inventory of substances (e.g. reagent, tips, waste) on the instruments connected to the system.

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
INV-1		Resource Identifier	CE	R	R	250	Name of the resource ⬛ Mapping Instrument Inventory to INV (68)
INV-2		Resource Status	CE	R	R	250	The current status of the substance Supported code: • `OK` = OK status (resource is available)
INV-3		Resource Type	CE	R	R	250	Type of substance Supported codes: • `MR` = Multiple Test Reagent • `DI` = Diluent • `CO` = Control • `LW` = Liquid Waste • `SW` = Solid Waste • `SC` = Countable Solid Item • `LI` = Measurable Liquid Item The field is empty if INV-21 and INV-22 are populated.
INV-8		Current Quantity	NM	R	R	20	This field contains the current quantity of the substance available on the instrument. ⬛ See also Example INV segments (68) This field is empty if INV-21 and INV-22 are populated.

⊞ INV – inventory detail segment

3 HL7 elements

INV – inventory detail segment

Field	Component	Element Name	Data Type	From LIS	To LIS	Maximum Length	Description
INV-11		Quantity Units	CE	R	R	250	The units of measure of the available quantity
	INV-11.1	Identifier	ST				Supported values: • `1` = pieces • `ul` = microliter • `%` = percentage The field is empty if INV-21 and INV-22 are populated.
	INV-11.2	Text	ST				Not supported
	INV-11.3	Name of Coding System	ID				Fixed value = `UCUM`
INV-15		Test/Fluid Identifiers	CE	O	O	250	List of supported tests by the reagent/RMC
	INV-15.1	Identifier	ST				SAP code
	INV-15.2	Text	ST				Test family
	INV-15.3	Name of Coding System	ID				Fixed value = `99ROC`
INV-21		Equipment State Indicator Type Code	ST	C	C		Fixed value • `IC` = Instrument Capacity This field is only populated if INV-3 is empty.
INV-22		Equipment State Indicator Value	ST	C	C		This field contains the relative throughput of the instrument capacity. The value is calculated based on the number of available components of the instrument and is expressed in percent. ⊞ See also Example INV segments (68) This field is only populated if INV-21 is not empty.
	INV-22.1						Instrument capacity
	INV-22.2	Subcomponent 1					Fixed value = `%`
		Subcomponent 2					This subcomponent is empty.
		Subcomponent 3					Fixed value = `UCUM`

⊞ INV – inventory detail segment

Example INV segments

Example 1: Instrument capacity

▪ If 1 of 2 components of an instrument is not available, the relative throughput capacity is 50%.

```
INV|Capacity|OK|||||||||||||||||||||IC|50^%&&UCUM
```

Example 2: Substance quantity

▪ A quantity of 400% of diluent indicates that 4 full bottles of diluent are available on the instrument.

```
INV|Diluent|OK|DI|||||400|||%^^UCUM
```

Type of consumable	Resource ID (INV-1)	Resource Type (INV-3)	Quantity Range (INV-8)	Unit of quantity (INV-11)	Description
Combo Tip Rack	Tip rack	SC	0–16	Piece	Only number of tip racks, not number of tips
P-Plate	Processing plate	SC	0–16	Piece	
AD-Plate	Amplification plate	SC	0–16	Piece	

⊞ Mapping Instrument Inventory to INV

Type of consumable	Resource ID (INV-1)	Resource Type (INV-3)	Quantity Range (INV-8)	Unit of quantity (INV-11)	Description
MGP	MGP cassette	SC	0–4x480	Piece	Remaining tests summed up for all cassettes.
Reagent	Reagent [Type] [sap-NR]	MR	0 – 12 x 480	Piece	All reagent cassettes of the same type are aggregated. Each type is reported separately.
RMC	RMC [Type] [sap-NR]	CO	(0–8) x (0–16)	Piece	Each control type is reported separately.
Lysis	Lysis reagent	LI	0–400	%	Remaining % summed up (max 200% on Cobas 6800)
Diluent	Diluent	DI	0–400	%	Remaining % summed up (max 200% on Cobas 6800)
Washbuffer	Wash reagent	LI	0–600	%	Remaining % summed up (max 300% on Cobas 6800)
Solid Waste		SW	0–200	%	Filled % summed up (max 100% on Cobas 6800)
Liquid Waste	Liquid waste	LW	0–600	%	Filled % summed up (max 300% on Cobas 6800)
Instrument Capacity	Capacity	IC	0/25/50/75/100	%	Capacity of an instrument

⊞ Mapping Instrument Inventory to INV

All resources are sent in aggregated form only. Each consumable type is embedded in its own INV segment. Reagents and RMCs have only 1 INV segment per reagent type. Only usable resources are counted. Expired resources, resources on erroneous stackers, bottles in unlocked slots, or any other type of unusable resources are not counted.

INV in OUL^R22 message

The system uses the INV segment to add inventory information to a result message.

You can configure the system to send lot numbers and expiry dates of reagents and consumables that were used to generate the results. By default, this option is disabled. Users with supervisor rights and Roche Service representatives can enable the option.

If the option is enabled, the system sends the following inventory information (resource) for each test result:

Name of resource (INV-1)	Resource type (INV-3)
<control name>	Control (CO) Only sent for released controls, but not for released test results
Diluent	Diluent (DI)

⊞ Inventory information

Name of resource (INV-1)	Resource type (INV-3)
Lysis reagent	Liquid item (LI)
Wash reagent	
<assay name)	Multi test reagent (MR)
MGP cassette	Solid item (SC)
Tip rack	
Amplification plate	
Processing plate	

⊞ Inventory information

Each resource (INV-1) is assigned to a resource type (INV-3).

Depending on the result type, the system sends different INV segments.

- RMCs:
  - 1 INV segment with name and expiry date of the used control is sent after the SAC segment.
  - 1 or more INV segments are sent after each channel result. A separate INV is sent for each resource type.
- Patient results:
  - 1 or more INV segments are sent after each channel result. A separate INV is sent for each resource type.

If inventory information is available, the system sends the respective INV segment irrespective of the result status.

🔆 The use of the INV segment to send inventory information in the result message (OUL^R22) is not according to the standard LAB-23 workflow. In the LAB-23 workflow, inventory information is sent in a SID segment. This deviation from the workflow is notified in field MSH-21 by the value "LAB-23^ROCHE".

Field	Component	Element Name	Data Type	To LIS	Maximum Length	Description
INV-1		Resource Identifier	CE	R	250	Name of the resource Supported values: • <control name> = name of control that belongs to the test result. For example: `MPX M(+)C` • <assay name> = copy of OBX-3.2 from overall result. • `MGP cassette` • `Lysis reagent` • `Diluent` • `Wash reagent` • `Tip rack` • `Amplification plate` • `Processing plate`
INV-2		Resource Status	CE	R	250	The current status of the substance Fixed value: • `OK` = OK status (resource is available)
INV-3		Resource Type	CE	R	250	Supported codes: • `MR` = Multiple Test Reagent • `DI` = Diluent • `CO` = Control • `LI` = Measurable Liquid Item • `SC` = Countable Solid Item
INV-12		Expiration Date/Time	TS	R	26	Expiry date of the resource specified in INV-1. Supported format: `YYYYMMDDHHMMSS` (UTC time)
INV-16		Manufacturer Lot Number	ST	R	200

OUL^R22 (observation result)

For sending observation results, the OUL^R22 message has the following structure.

Automatic result release

The system can be configured to send results automatically to the LIS after being calculated.

Enabling automatic result release does not affect the structure of the result message.

To identify the automatic release of a result, the system sends the Instrument Gateway ID in field OBX-16.

▸ OBX in result message (54)

Segment	Description	Usage	Cardinality

Error handling

This chapter describes how the system handles communication errors.

In this chapter   **5**

5 Error handling

5 Error handling

Error handling

The system provides a simple error handling as described below.

Message rejection by the LIS

If the LIS does not accept a message, it returns an ACK message with the code `AR` (`Application Reject`) in the field MSA-1. The system then discards the message and informs the user about the rejected message. The system remains connected with the LIS after receiving an `AR`.

No reply from the LIS

If the system sends a message to the LIS and receives no acknowledgment within a timeout-period of 30 sec, it resends the message another 2 times.

If the system receives no acknowledge after sending the same message 3 times, it discards the message and notifies the user about the failed message transmission.

When the system does not receive any acknowledge after sending the same message 3 times, the system remains connected to the LIS.

The number of attempts to resend a message is limited to 2, which is not configurable.

Message rejection by the system

If the system cannot process a message received from the LIS, it returns an ACK message with the code `AR` (`Application Reject`) in the field MSA-1. When rejecting a message, the system remains connected to the LIS.

The system can reject a message due to the following reasons:

- The message cannot be processed because it is incomplete or contains invalid values.
- The message contains a test order that cannot be created in the system due to restrictions (e.g. reuse period time for sample IDs).

-ϙ- If you use the *Host Query* workflow, the *Batch Download* option must also be enabled. If *Batch Download* is disabled, the system rejects all test orders from the host.

Invalid characters

If there is an invalid ASCII character in a message field, its content is replaced with the text `<UNCONVERTABLE VALUE>`.

```
SPM||<UNCONVERTABLE•VALUE>||SP^surePath^99ROC|||||
||P||||||||||||||||
```

⊞ Single target identifiers

(1) For the utility channel software, assay name, selectable sample input volumes, sample types, and up to 4 targets are configurable.
– assay name: "U_" + maximal 14 digits
– sample input volumes: Up to 6 sample input volumes are available.
– sample types: Up to 13 sample types are available

(2) Target names are customizable for the utility channel software.

6 Appendix

Result codes for OBX segment

This section specifies for each assay what values must be sent in the different types of OBX segments (overall result, result interpretation, channel result).

In this section

Result types

The system returns different types of results to the LIS (overall result, result interpretation, and channel result).

Single- vs. multi-channel assays

There are 2 basic types of assays: single-channel and multi-channel.

- *Single-channel:* For each test order, the system returns 3 results: 1 overall result, 1 result interpretation, and 1 result for the single channel.
- *Multi-channel:* For each test order, the system returns 1 overall result, 1 result interpretation, and 1 result for each channel.

Assays without overall result

The following assays contain no overall result.

- CT
- NG
- CT/NG
- TV
- MG
- TV/MG
- HPV-HR
- HPV-GT
- MTB
- MTB-RIF/INH
- MAI
- SARS-CoV-2
- SCoV2-FluA/B

If no overall result is included in the result message, the system sends the code `NA` in OBX-5 of the result interpretation OBX, and also in OBX-8 of the overall result OBX.

Interpretation codes for OBX 8

The system supports the following result interpretation codes in OBX-8:

- NA: not applicable
- NR: non-reactive
- RR: reactive
- VAL: valid (only used for RMCs)
- ND: not detected
- AT: above titer
- BT: below titer
- ACO: above cut-off
- BCO: below cut-off
- POS: positive
- NEG: negative

(1) For the U_xyz assay, up to 4 channels are configurable.

(2) The target names are defined in the UCT and "TGTx" is used as a placeholder.

(3) Only used for RMCs

(4) See Error flags (196)

Assay-specific result messages

The following sections provide assay-specific examples of result messages sent from the system to the LIS.

In this section

Qualitative assays – blood screening

In this section

Babesia examples

Babesia is a qualitative single-channel assay. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

WNV examples

WNV in an example of qualitative single-channel assay. For each test order, the system returns 3 OBX segments in a OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

✿ Example for TV/MG: control (-) C

MG examples

MG is qualitative single-channel assay. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

MTB examples

MTB is a qualitative assay with 1 channel defined for the target. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the channel result, 1 for the overall result, and 1 for the result interpretation.

⚙ Example for HPV-GT: control (-) C

HPV-HR examples

HPV-HR is a qualitative single-channel assay. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

Quantitative assays – virology

In this section

CMV examples

CMV is a quantitative single-channel assay. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

BKV examples

BKV is a quantitative single-channel assay. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

EBV examples

EBV is a quantitative single-channel assay. For each test order, the system returns 3 OBX segments in an OUL^R22 message: 1 for the single channel result, 1 for the overall result, and 1 for the result interpretation.

Qualitative and quantitative assays

In this section

DPX examples

DPX is a dual-channel assay that consists of a quantitative (Parvovirus B19) and a qualitative (HAV) assay. For each test order, the system returns 5 OBX segments in a OUL^R22 message: 1 per channel result, 1 for the overall result, 1 for the result interpretation, and 1 for the cut-off value.

UCAPs

In this section

UCAP examples (176)

UCAP examples

UCAPs are qualitative assays with the possibility of up to 4 channels (targets). For each test order, the system returns up to 6 OBX segments in a OUL^R22 message: 1 per channel result, 1 for the overall result, and 1 for the result interpretation.

⚙ Example for UCAP: control (–) C (4 targets activated)

Results with Ct values

This section provides background information about Ct values and a selection of example result messages containing Ct values.

In this section

About Ct values (180)
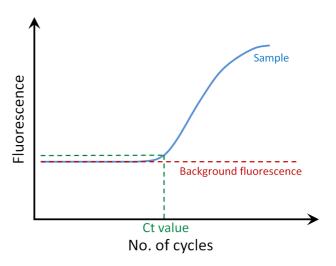

Results with Ct values for qualitative assay (181)

Results with Ct values for quantitative assay (184)

Results with Ct values for qualitative/quantitative assay (185)

UCAP result messages with Ct values (188)

About Ct values

The Ct value (or threshold cycle) is the cycle number at which the fluorescence signal of the reaction is above the background fluorescence. At the Ct value, a detectable amount of the PCR product has been generated in the early exponential phase of the reaction. The Ct value therefore indicates the number of cycles necessary to detect a real signal in a sample.

Sending Ct values

By default, the option to send Ct values to the host/LIS is disabled. If you wish to enable the option, talk to your Roche Service representative.

If the option is enabled, the system sends Ct values together with the result to the host. Ct values are sent for target results, internal controls, RMCs, and user-defined controls.

The system sends Ct values in a supplementary OBX segment attached to each target result OBX segment.

Sending rules:

- Ct values are sent for each channel result. No Ct values are sent for overall results and result interpretations.
- Ct values are only sent for valid results. For invalid results, no Ct values are sent.
- If multiple runs are performed for a sample, only the Ct value of the last run is sent.

The following table describes all possible scenarios for sending Ct values depending on the type of result and assay.

Result [1]/ assay	Ct values in OBX-5 of supplementary OBX segment (Target_Ct_value^IC_Ct_value^QS_Ct_value)
Reactive/positive target result Qualitative assay	`Target^IC`
Positive target result Quantitative assay	`Target^^QS`
Reactive/positive target result Mixed assay (quantitative and qualitative, e.g. DPX)	`Target^IC^QS`
Non-reactive/negative target result Qualitative assay	`^IC`
Negative target result Quantitative assay	`^^QS`
Non-reactive/negative target result Mixed assay (quantitative and qualitative, e.g. DPX)	`^IC^QS`
Invalid result	No supplementary OBX segment sent
Reactive/positive target result only	`Target`

▦ Scenarios for Ct values

(1) Patient result or RMC result

Results with Ct values for qualitative assay

The OBX segments containing the Ct values are highlighted in blue.

⚙ Example for UCAP: 3 targets non-reactive for UCAP5042: no Ct values sent (UCAP with 3 targets and channel 5 inactivated)

6 Appendix

Results with reagent and consumables

This section provides example result messages containing reagent and consumable information.

> ☀ • The INV segments containing the reagent and consumable information are highlighted in blue. Inventory information is sent for each channel result.
>
> • Depending on the inventory, the inventory sequence might differ from the example result messages shown below.

```

Error flags

💡 Error flags are dynamic and may change depending on the installed ASAP.

LIS flag	Description
C01	Calculation failure
C01H1	Calculation failure for target 1
C01H2	Calculation failure for target 2
C01H3	Calculation failure for target 3
C01H4	Calculation failure for target 4
C01H5	Calculation failure for target 5
C01T	Clot during dispense in neighboring well, risk of carryover
C02	Anomaly calculated
C02H1	Anomaly calculated for target 1
C02H2	Anomaly calculated for target 2
C02H3	Anomaly calculated for target 3
C02H4	Anomaly calculated for target 4
C02H5	Anomaly calculated for target 5
P01T	Transfer Module process execution error
P02T	Clot detected during aspiration
P03T	Clot detected during dispense
P04T	RMC arrival check failed
P05P	Processing Module process execution error
P06P	Volume Error during Reagent Dispense
P07P	Volume Error during supernatant removal
P08P	Processing temperature not reached
P09P	Processing temperature out of range
P10P	A timeout was reached
P11A	Amplification and detection process execution error
P12H0	Fluorescence signal saturation for IC/IQS
P13H1	Fluorescence signal saturation for target 1
P13H2	Fluorescence signal saturation for target 2
P14H3	Fluorescence signal saturation for target 3
P14H4	Fluorescence signal saturation for target 4
P14H5	Fluorescence signal saturation for target 5
P15	Viability Time of a test order has expired
Q01	RMC failed
Q02	Control Batch Failed
R01	Supply with critical validation error
R02	Supply with fatal validation error
U01T	Sample Pipettor blocked during tube access
U02T	Insufficient volume detected in sample tube, sample not transferred

⊞ Error flags

LIS flag	Description
U03	RFID calculation parameters error
U03P	Initial Reagent or MGP Cassette Volume Check failed
U04	User aborted Test Order
U05	The Interlock was triggered.
U06T	Insufficient volume aspirated, sample not transferred
U07	User invalidated test order
Y01T	Transfer module is not available.
Y02T	Hardware Error in Transfer Module
Y03P	Processing module is not available.
Y04P	Hardware Error in Processing Module
Y05A	Analytic unit is not available.
Y06A	Hardware Error in Analytic Unit
Y07B	Hardware Error in Consumable Cell
Y08F	Hardware Error in Infrastructure
Y10	Error during handling of a consumable, reagent cassette, or RD5 rack
Y11A	Channel shift detected in Analytic Unit
Y20M	Analytic System Software Error
Y21W	Instrument Gateway Software Error
Y22V	Pooling Instrument Manager Software Error
Y23K	Pooling Instrument Software Error
Y24X	ASAP error
Y40T	Error during liquid level detection during sample transfer process
Y41T	A tip could not be picked up for RMC transfer.
Y43	The on board temperature is out of range

⊞ Error flags

Communication log

The system stores all communications into a log file (`LisInterfaceTracer.log`) that is part of the standard problem report.

> ⚠ **WARNING**
>
> **Disclosure of confidential data in log file**
>
> Unauthorized users can view confidential data stored in the log file.
>
> ▶ Ensure that the log file is protected from any unauthorized access.
>
> ▶ Restrict physical access to the log file.
>
> ▶ Read the respective safety information on data security provided along with this product.

Glossary

ASAP Array of files that contain the parameters and specifications of a specific test. It includes definitions for the robotics, calculation packages for the result calculation and libraries for the plausibility calculation.

DHCP Network protocol used for automatically distributing network parameters such as IP addresses to computers and interfaces.

GUID A 128-bit hexadecimal number created by the system to identify a message in the transmission record (e.g. `3F2504E0-4F89-11D3-9A0C-0305E82C3301`).

IG Server Integrated part of the **cobas**® 6800/8800 Systems used to perform PCR-based Nucleic Acid Testing (NAT) in diagnostic and blood screening facilities. It stores all data generated by the system, manages the sample workflow for pooling, connections to the LIS, and the integration of multiple instruments. The IG server also provides a GUI for the user to interact with the system, both via the instrument and via a Web Server. No standalone functionality is intended.The IG Server can control up to 5 **cobas**® 6800 Systems with up to 6 **cobas p** 680 instruments and including 1 printer.

LIS Host computer connected to the **cobas**® 6800/8800 Systems Instrument Gateway. It holds the patient Information and communicates with the **cobas**® 6800/8800 Systems using the HL7 protocol.

LOINC Preferred code set of HL7 for laboratory test names. LOINC validated by HL7 is effective globally. Development LOINC is system-specific and not validated by HL7 (e.g. created by Roche for **cobas**® 6800/8800 Systems).
